Filip Enculescu

FRONTEND DEVELOPER

Madrid, Spain
(+34) 601 173 284
filip.enculescu@gmail.com
linkedin.com/in/filip-enculescu/

JavaScript developer passionate about building scalable web applications using React and Angular. A self-taught and persistent learner who regularly develops complex projects to expand technical skills. Experienced working in Agile teams using Scrum, with a strong interest in startup environments where scalability and high-traffic applications are critical. Recently started working with the OpenAI API and building AI agents. Thank you for checking my profile.

EXPERIENCE

2023 - Current
(currently)

SENIOR FRONTEND DEVELOPER - ING BANK

Frontend Developer at **ING**, occasionally serving as **Scrum Master** for the frontend team. In addition to development, I analyze upcoming features and translate them into well-defined user stories for the team. I'm also the main creator of an internal testing tool designed to accelerate end-to-end testing flows and deployments through **Azure Pipelines**. For public-facing applications, we use a **microfrontend architecture based on Web Components**, while internal tools are built with **React, Next.js, and React Native**. Recently, I've also been working on **AI integrations**, including implementations with the **OpenAI API** and building **AI agents** using **n8n** and **Maker**.

React / Native - Angular - NextJS - Web Components - Jest - Azure devops

2021 - 2023
(2 years)

SENIOR FRONTEND DEVELOPER - NEWBLACK

Build intuitive applications to help people buy products easier and more secure. Extend functionalities and resolve performance issues. Apart of developing, I am in charge of making deployments to production and code quality reviews.
Angular 12 - Typescript - SASS - React - NextJS - Ionic 5

2019 - 2021
(2 years)

STARTUP CTO & DEVELOPER - JOBLINK

Co-Founder and full-stack developer working to build the first freelance-recruiting platform for Recruiters and candidates. Design MVP requirements, create tasks for the team, choose the right technologies and supervise the execution. Also helping as a developer on backend OR frontend when needed.
Angular 9 - Typescript - SASS - Ionic 5 - React Native - NodeJS - SQL - WebSockets - Stripe - MongoDB - AWS - Chrome Extensions

2017 - 2019
(2 years)

SENIOR FRONTEND DEVELOPER - NATO (NCI AGENCY)

Contracted as AngularJS expert to solve performance issues and to develop new functionalities for the current military application (TOPFAS Project). Also for development of a new mobile applications using Angular and Ionic.
AngularJS - IE - Angular 6 - Ionic 3 - SASS - Bootstrap / Material

ENGLISH

2014 - 2017
(3 years)

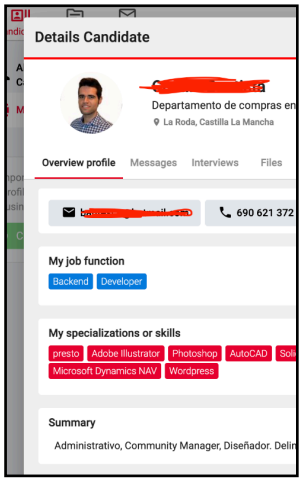
FULLSTACK DEVELOPER - MOVE4TALENT S.L

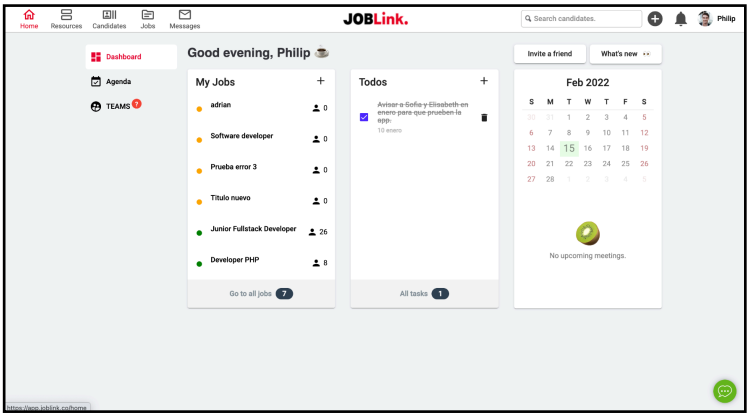
Development of the POS (Point of sales) and ADMIN (Dashboard) for multiple formats (desktop, tablet & mobile), both backend as frontend along my team. This was my first job as a developer and gained a lot for experience here.

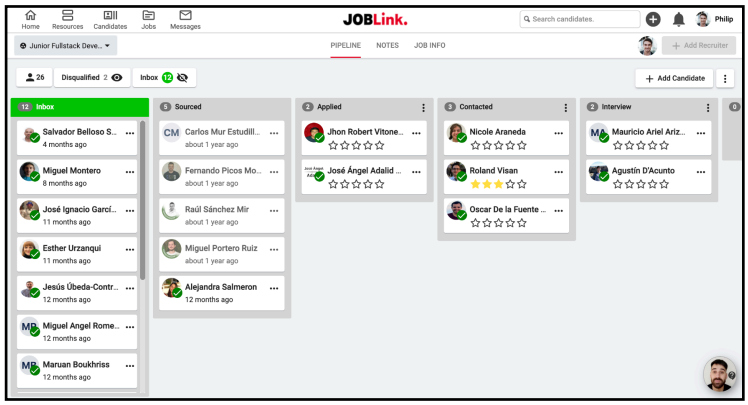
AngularJS - AWS - NodeJS - CSS3 - HTML5 - WebSockets - Firebase - jQuery - Cordova - Ionic - PHP - Memcache.

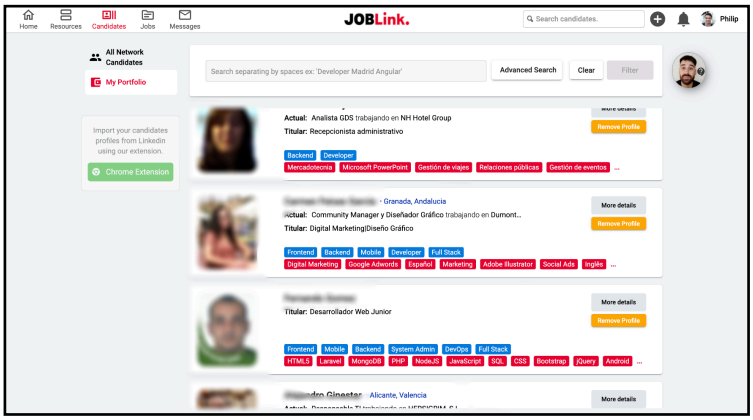
(JOBLink) - CoFounder & Developer

During my instance at NATO I came up with an idea to create a platform for Recruiters to make easier find new candidates and share them with other Recruiters via freelancing collaboration. So, my co-founder (Adrian) and me created a team of five developers and started building our application.

I was in charge of:








- Design the MVP requirements based on the feedback we had from the initial customers.
- Help the team to design the architecture of frontend (Angular) and backend (NodeJS, ExpressJS...)
- Search the best payments provider and make the integration with it (Stripe).
- Build the messaging part of the application using web sockets and MongoDB.
- Talk with customers to interate and improve our product (weekly).
- Developed a chrome extension to help Recruitrers capture more easy the candidates profiles.
- Built the public website for the startup to engage first users to use the platform.
- Built the admin side app to manage accounts and to analize the usage of the application (analitics).
- Built a small version of our platform to run natively on desktop using Angular & ElectronJS.
- Setup, deploy and maintain our servers, SPA applications and other services on AWS.
- ...and of course helping my team as as developer...
